

INNOVATION IN ISOLATION

MONITOR BOTH PATIENTS AND PROVIDERS

Transmit patient data wirelessly through isolation equipment

Athena GTX's novel designs support the monitoring of both the provider and the patient with intuitive, interoperable wireless technology. Small, lightweight monitors can be worn inside protective equipment while streaming live data wirelessly to an external PC, tablet, or other smart device. With the **Athena Device Management Suite software (ADMS)**, contamination can be minimized and containment maximized by reducing the need to be within close proximity to the patient to assess their status.

Monitoring of patients and caregivers is possible through personal protective equipment, patient isolation pods, HazMat suits, barrier curtains, and other biocontaminant equipment. Kits can be customized to meet your needs.

iDT INFECTIOUS DISEASE TRANSPORT

TRANSPORT WITHOUT EXPOSURE

The Infectious Disease transport kit with WVSMs includes everything clinicians need to monitor patients and providers during an incident

- Includes up to Four(4) WVSMs with peripherals
- Monitoring on smart device

WVSM FEATURES

The small and portable **Wireless Vital Signs Monitor (WVSM®)** collects the data you need when and where you need it to make critical decisions, even in remote, isolated and multi-patient environments.

- Automatically monitors SpO2, HR, NIBP and ECG
- Weighs just one pound
- A fraction of the cost of a larger single-patient monitor
- Automatically upload 4.5 hours of patient history
- Wireless range of up to 200 yards
- Up to 7.5 hours of battery life
- Color-coded vitals provide simplified status
- Stays with the patient from point-of-injury until treatment

Multiple patients, simultaneous monitoring, on a single screen
